

Testna pitanja za CCE certifikat

1 In a standard personal computer, do SCSI and IDE drives normally have the same size and configuration for their respective power cable connectors?

- Yes.
- No.
- Sometimes.

2 What does the acronym BIOS mean when used in connection with a PC?

- The Basic Input Output Structure
- The Basic Inboard Outboard Structure.
- The Basic Input Output System.
- The Basic Inboard Outboard System.
- None of the above.

3 The hard disk drive on a personal computer normally holds:

- The system clock.
- A serial port.
- The BIOS.
- Device Drivers.
- Other hardware devices.

4 How many pins are actually on a standard IDE drive data connection?

- 40.
- 30.
- 39.
- 29.
- 50.

5 The BIOS is:

- Virtual memory.
- RAM.
- Volatile memory.
- Normally stored on an EPROM "chip".
- None of the above.

6 What size hard disk drive would you normally expect in a standard laptop computer?

- 1 1/2 inch drive.
- 2 1/2 inch drive.
- 3 1/2 inch drive.
- 4 1/2 inch drive.
- None of the above.

7 For the purpose of determining data type, what is a file header?

- The first few bytes of a file.
- The last few bytes of a file.
- All of the bytes of a file.
- The first 1024 bytes of a file.
- The first 2048 bytes of a file.

8 Should an examiner wipe and validate examination media?

- Yes, to ensure that there is no data from previous cases.
- No, because I always use brand new media.
- It doesn't matter, freshly formatting the media using the "Full" or /u switch will ensure that the hard drive is properly wiped and validated.
- It doesn't matter, because when I make a copy of the original media to the "target" media, the copy will overwrite all previous data.

9 How would you write-protect a 3 1/2 inch double-sided high-density floppy diskette?

- Close the write-protect notch.
- Open the write-protect notch.
- Use a write blocker.
- Put tape over the notch.

- Use a known plain-text attack first.
- Brute-force attack the password first.
- A file protected with PGP can never be opened.
- Defeat easier to "crack" passwords on the computer and try them.
- Send it to NSA.

13 If the examiner finds that there is a virus present on the original media, should the examiner remove it from the original media before performing the examination?

- Yes.
- No.

14 Would a plain text file created with the DOS EDIT command or Notepad have a file header?

- Yes.
- No.

15 Is it OK to purposely overlook evidence on an examined computer that may help the defense or other side?

- Yes, I should try to help the person who is paying me.
- Yes, I do not need to report all of the evidence that I find during an examination.
- Yes, if it is exculpatory.
- Sometimes.
- No.

16 Should an examiner consider an individual's right to privacy when collecting or acquiring data from magnetic media?

- No, once the examiner has the computer, it can be searched without regard to privacy issues.
- Yes, the examiner must always have a search warrant or court order.
- Yes.
- No.

17 What does the acronym POST mean as it relates to a PC?

- Primary Operational Short Test.
- Pre Operational Self Test.
- Power Operating System Test.
- Primary Operating System Test.
- Power On Self Test.

18 What is the hexadecimal value of ASCII decimal value 255?

- A1
- A0
- FF
- FE
- None of the above.

19 What does the term "field" mean in relation to a database?

- A record.
- Space for a data item.
- Multiple records.
- A column.
- A row.
- None of the above.

20 PGP is an example of public key encryption.

- Yes.
- No.

21 Public Key encryption uses:

- One key.
- Two keys.

22 Which is most secure:

- HASH
- CRC
- CHECK SUM
- SHA

23 Describe a row in relation to a spreadsheet.

- Horizontal in-line cells.
- Vertical in-line cells.

24 Hexadecimal is what number base?

- 2.
- 8.
- 16.
- Something else.

25 What does the acronym SMTP stand for?

- Standard Mail Transfer Protocol.
- Standard MIME Transfer Protocol.
- Simple Mail Transfer Protocol.
- Simple MIME Transfer Protocol.
- None of the above.
